

It's about hitting the ground running.

More and more, organizations seeking a permanent presence on the Internet are promised "out-of-the-box" solutions. The major difference with a FreeGate solution is that it's a promise that truly delivers.

OneGate turnkey Internet access systems allow small businesses to get on the Net quickly and affordably without the hassles of separate pieces of equipment and technical expertise.

## ***OneGate by FreeGate: Internet access systems for small business***

With OneGate by FreeGate, you connect to the Net, surf the Web, and use e-mail the same day!

The OneGate's new thin server technology allows growing companies with as few as two or as many as two hundred users to do the following:

- Connect affordably, quickly and securely to the Internet
- Provide Internet e-mail to every user
- Publish information to the intranet or Internet Web server
- Communicate securely with partners, branches and remote users over the Internet

Gone are the hassles of countless phone numbers, network addresses, multiple user entries and complex parameters. FreeGate's turnkey Internet access systems provide quick-to-implement, reliable secure Internet connection for small businesses in a very low cost system.

FreeGate's Internet access systems provide industrial-strength capabilities and product features that were only available to large businesses before. With critical Internet features like a web server, e-mail, integrated firewall, integrated router, file transfer, and remote management, small businesses can operate as BIG businesses on the Net.

Connect your multiple offices and remote users securely and cost-effectively over the Net. Get enhanced security over the Net and save money over traditional dial-up and leased lines by implementing FreeGate's Virtual Private Networking (VPN) software options. Our VPN Branch office and Remote user software options allow you to connect your multiple offices and outlying employees together using the Internet. And we connect you all together at lower costs and better security than you would get over traditional Telecom facilities.

## ***It's thin! Thin in costs! Thin in hassles!***

### ***Big on cost reduction. FreeGate's new thin server technology***

FreeGate has optimized its technology to provide a specialized thin Internet system in a very compact, low-cost hardware/software system with features normally provided on more complex separate systems.

FreeGate systems grow with a business, enabling not only Web publishing and e-mail but secure, multi-office remote access, electronic commerce, and business solutions from FreeGate partners.

### *Easy-to-use system management and administration designed for non-technical personnel*

FreeGate provides an easy-to-use web browser interface for a single, simplified point of administration from which e-mail, name directories, Web access, firewall, and file sharing are delivered across multiple locations as if on a single local network. There is no need to hire technical people. Existing receptionists or office personnel can learn how to administer the system in less than 30 minutes or our business partners can provide total system installation and management for you.

FreeGate's Internet thin servers are the first integrated access systems to deliver the cost efficiencies, reliability, security and ease of use that small companies and organizations need to do business over the Internet. FreeGate systems grow with a business, enabling not only Web publishing and e-mail but secure, multi-office remote access, electronic commerce, and cooperative applications down the road.

### FreeGate Provides Growth Flexibility

#### *FreeGate provides a complete family of Internet access system products for small business:*

- The OneGate 1000 (formerly called the Multi-services Internet Gateway), designed for business locations of 25 to 200 users
- The OneGate 150, our newest product, designed for business locations of 2 to 25 users

### Use the **OneGate 1000** for headquarters and the **OneGate 150** for small branches

The OneGate 1000 and the OneGate 150 share all the same features. If you want to be assured extra redundancy, complex VPN networking, and very high speed services, the OneGate 1000 is recommended. The model 1000 is recommended for a company's headquarter location and the OneGate 150 is an excellent economic choice for connecting small branch offices to the company headquarters.

### Worldwide network of resellers and business partners

FreeGate provides Internet access systems through a worldwide network of Value Added Resellers, System Integrators, Distributors, Internet Service Providers, and business partners. FreeGate is easy to do business with and has a very strong commitment to providing the best customer service.
